

Dashboard Explanation

Target Audience

Who is our target audience?

The dashboard is useful for anyone in the marketing team and related departments who need comprehensive statistics about our clients and campaigns.

How can they benefit from it?

Understand Customer Demographics: Gain insights into who our customers are, including their age, income, education, and family status.

Analyze Campaign Performance: Identify the factors that led to the success or failure of previous campaigns and learn how to improve future campaigns.

Identify valuable customers: Determine who the most valuable customers are and target them in upcoming campaigns for maximum impact.

Customers Page:

The goal of the Customers Page in the Power BI report is to provide a comprehensive overview of the customer base. This page aims to help stakeholders understand the demographics, behaviour, and key characteristics of the customers. By presenting key metrics and insights.

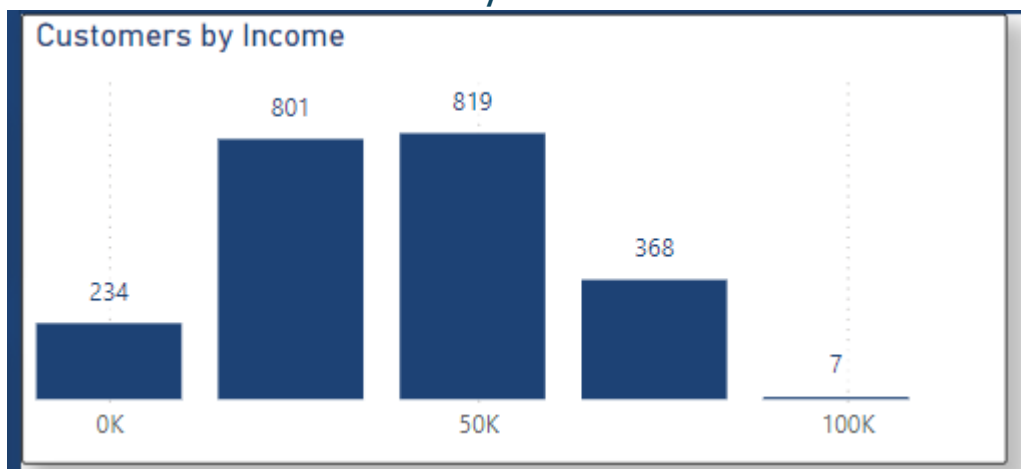

List of KPIs:

No. of Customers	The total count of unique customers in the company	Understanding the total customer base size helps in
------------------	--	---

		evaluating the reach and scale of the company's marketing efforts
Avg Age	The mean age of all customers	Knowing the average age helps in tailoring marketing strategies to suit the predominant age group.
Avg Income	The median annual income of the customers.	Understanding the average income level of customers allows for better targeting of Campaigns
Avg Dependents	The average number of dependents (kids and teenagers) per customer	Knowing the average number of dependents helps in understanding the family-oriented nature of the customer base. This insight can guide family-targeted promotions and campaigns
Avg Tenure	The mean tenure of customers, calculated as the average number of years since each customer first enrolled	Average tenure indicates customer loyalty and retention. Longer tenure suggests customer satisfaction and loyalty

Customers distribution by income

Customers by Income is a bar chart that visualizes the distribution of customers based on their income levels. This chart is important because it provides a visual representation of the income distribution among the customer base. It helps in understanding the financial demographics of the customers

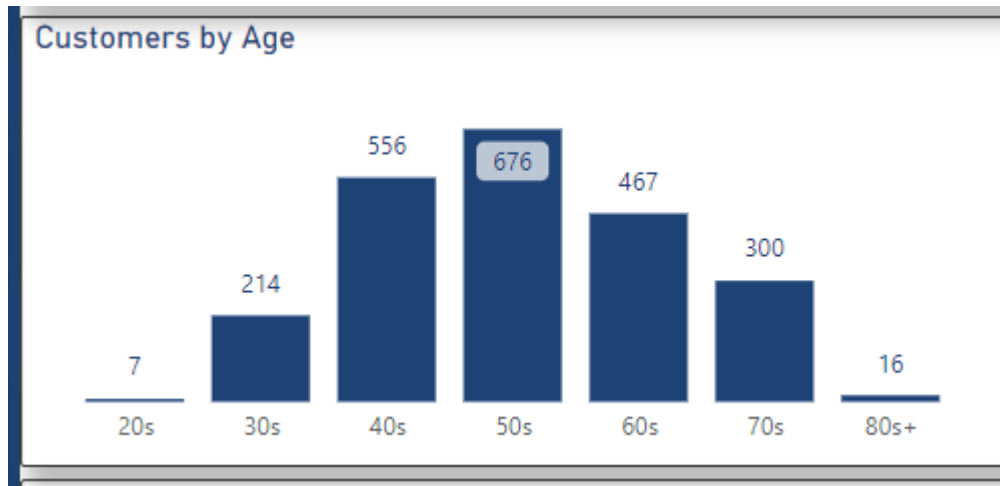

Conclusions

1 - Majority in Middle-Income Bracket: The highest number of customers fall within the 50K income bracket, with 801 and 819 customers respectively, indicating that a significant portion of the customer base has a moderate-income level.

2 - Potential for Targeted Marketing: The concentration of customers in the middle-income bracket suggests that marketing efforts should be tailored to appeal to this demographic. High-

income and low-income segments, although smaller, can be targeted with specialized products or promotions.

Customers distribution by age

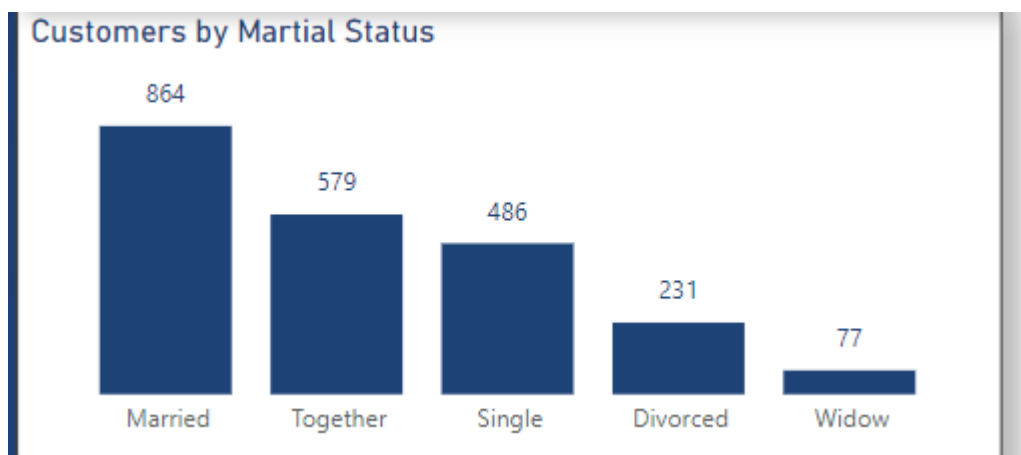

This chart is to show how is the distribution of customers across different age groups (20s, 30s, 40s, 50s, 60s, 70s, 80s+). Each bar represents the number of customers within a specific age range. This chart is crucial for understanding the age demographics of the customer base. It helps businesses tailor their campaigns strategies

Conclusions

- 1 - The largest group of customers is in their 50s, with 676 customers, followed closely by those in their 40s (556 customers).
- 2 - Most customers are between their 40s and 60s, suggesting that marketing campaigns should focus on this age range for maximum impact.

Customers by Marital status

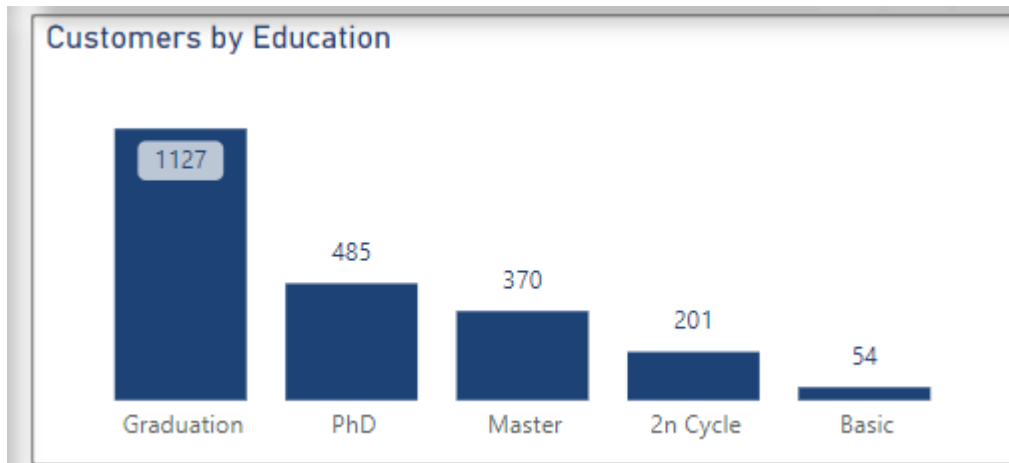

Displays the distribution of customers based on their marital status categories (Married, Together, Single, Divorced, Widow). This chart is important for understanding the marital status

demographics of the customer base. It helps in tailoring marketing campaigns and product offerings to the different marital status groups, which may have varied needs and preferences.

Conclusions

1 - The largest group of customers is married, with 864 customers. The second-largest group is "Together", with 579 customers. So we have the majority of our customers not single

Customers by Education

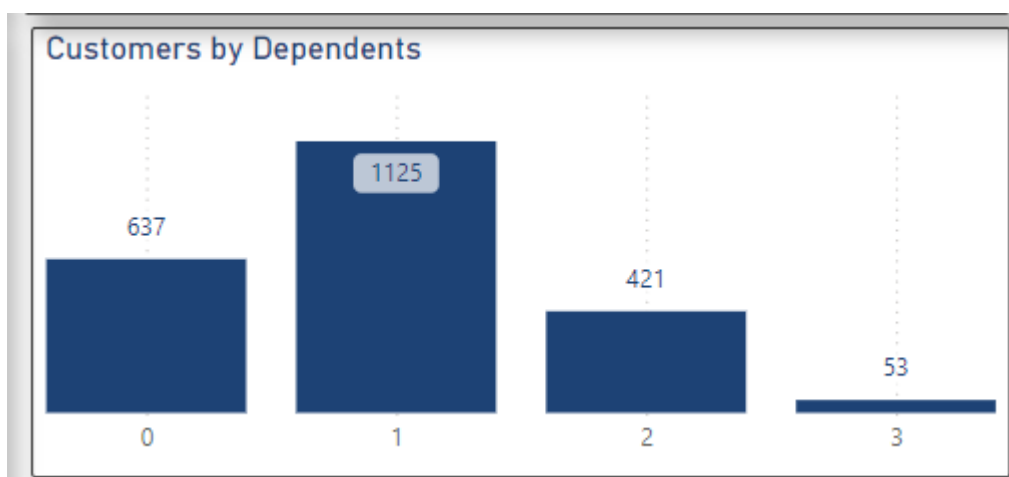

It is a bar chart that illustrates the distribution of customers across various education levels (Graduation, PhD, Master, 2n Cycle, Basic). This chart is crucial for understanding the educational background of the customer base. It helps businesses tailor their marketing strategies to resonate with different education levels.

Conclusions

1 - The largest group of customers has completed graduation, with 1127 customers, indicating a highly educated customer base.

2 - There are 485 customers with a PhD and 370 customers with a Master's degree, suggesting a significant portion of the customer base has advanced education.

Customers by Dependents

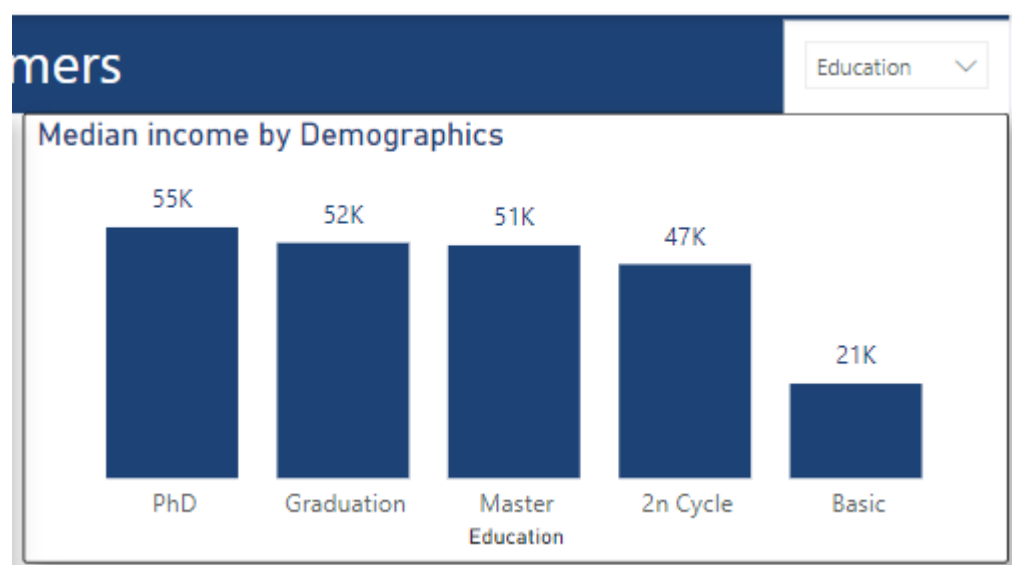

It is a bar chart that shows the distribution of customers based on the number of dependents (0, 1, 2, 3). Each bar represents the number of customers within each category of dependents. This chart is important for understanding the family and responsibilities of the customer base. It helps in designing campaigns strategies that cater to families with different numbers of dependents.

Conclusions

- 1 - The largest group of customers has one dependent, with 1125 customers, indicating a significant portion of the customer base with some family responsibilities.
- 2 - There are 637 customers with no dependents, representing a substantial segment that may have more disposable income and different lifestyle needs.
- 3 - There are 421 customers with two dependents and 53 customers with three dependents, suggesting smaller segments with potentially higher family-related expenses.
- 4 - For those with no dependents we need emphasize products and services that cater to personal interests and lifestyles, such as wine and gold
- 5 - For those with Multiple Dependents we need to promote products that offer bulk discounts, family packages, and cost-saving options.

Median income by demographics

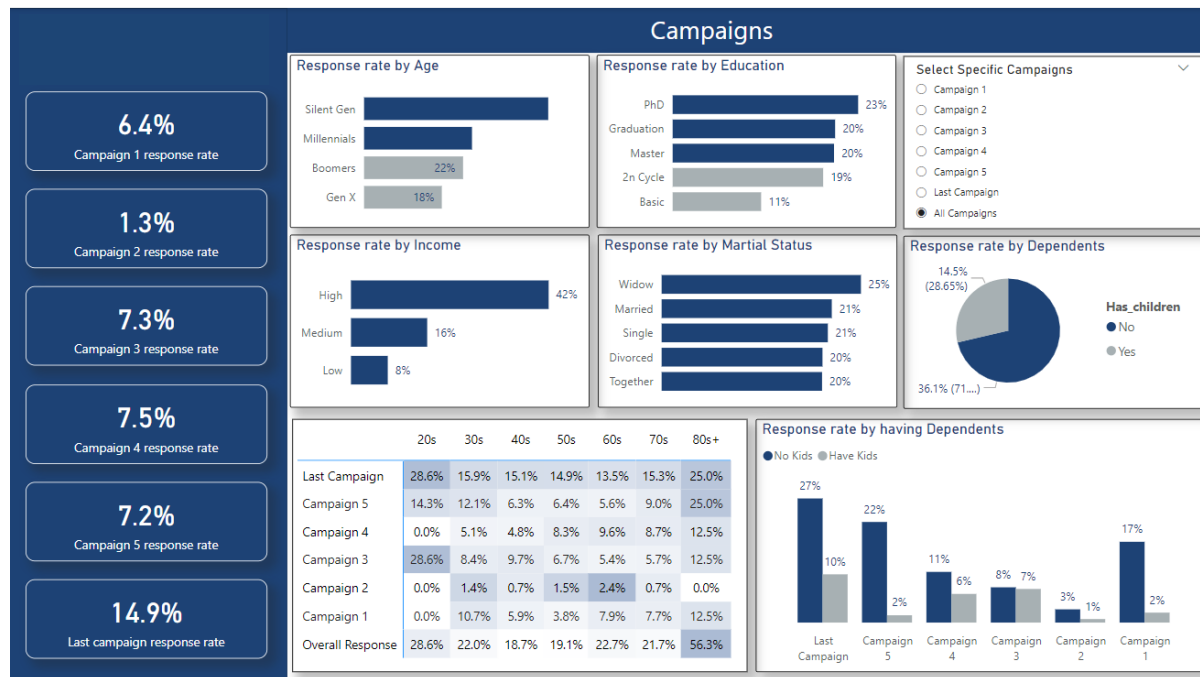

It is a dynamic bar chart that displays the median income of customers segmented by different demographic attributes. In this example, the chart shows median income segmented by education level (PhD, Graduation, Master, 2n Cycle, Basic). The field parameter above the chart allows users to dynamically switch between different demographic segments such as Age, Dependents, Has_children, Marital_Status, and Education. This dynamic chart is crucial for understanding how median income varies across different demographic segments.

Conclusions

- 1- Customers with no kids tend to have much higher median income compared to customers with kid
- 2 - Higher Education Correlates with Higher Income
- 3 - Married Customers Have Higher Median Income

Campaigns Page:

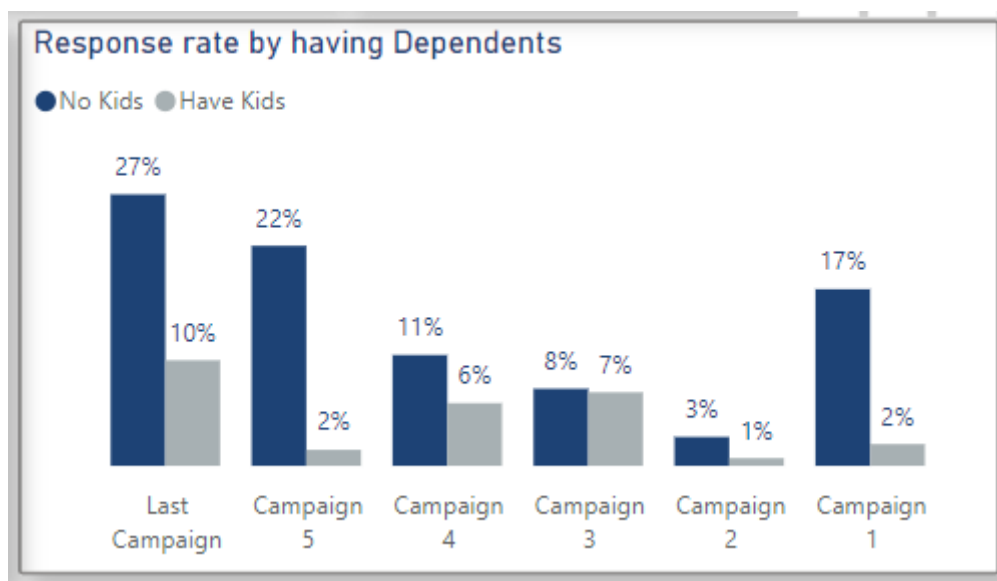

The Campaign Analysis Page provides a comprehensive overview of the response rates across various marketing campaigns, segmented by different customer demographics. This page is designed to help marketing team to understand the effectiveness of each campaign and identify which customer segments are most responsive to marketing efforts.

List of KPIs

Campaign 1 Response Rate	The percentage of customers who responded to Campaign 1.	Indicates the effectiveness of the first campaign in engaging customers
Campaign 2 Response Rate	The percentage of customers who responded to Campaign 2.	Indicates the effectiveness of the second campaign in engaging customers
Campaign 3 Response Rate	The percentage of customers who responded to Campaign 3.	Indicates the third effectiveness of the first campaign in engaging customers
Campaign 4 Response Rate	The percentage of customers who responded to Campaign 4.	Indicates the effectiveness of the fourth campaign in engaging customers

Campaign 5 Response Rate	The percentage of customers who responded to Campaign 5.	Indicates the effectiveness of the fifth campaign in engaging customers
Last Campaign Response Rate	The percentage of customers who responded to last Campaign.	Indicates the effectiveness of the last campaign in engaging customers
Overall Response Rate	The average percentage of customers who responded to at least one campaign.	Offers an overall view of the overall success of marketing campaigns in engaging the customer base.

Response rate and Having dependents

The goal of this chart is to measure the effectiveness of the campaigns with our customers that have kids and the customers that don't have kids

Conclusion:

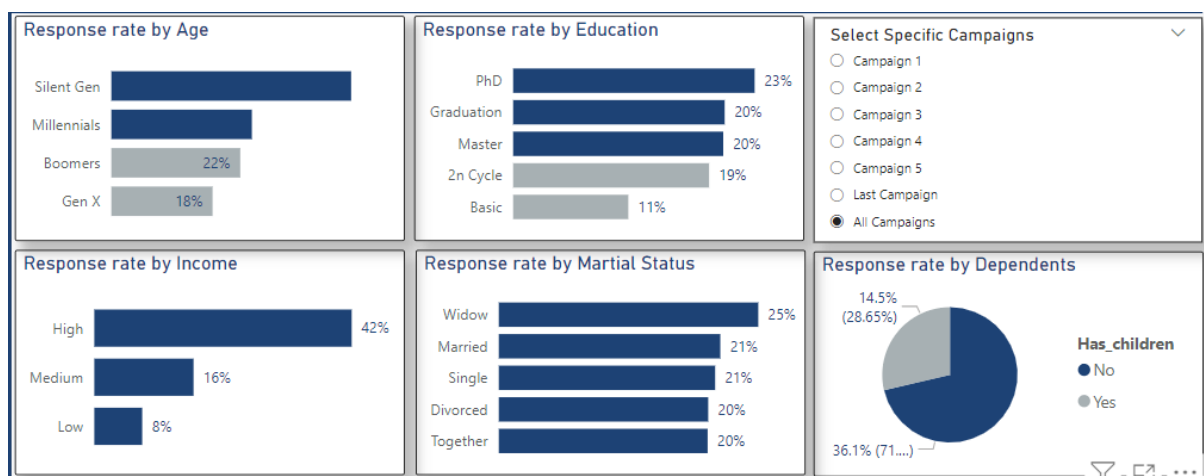

Through the chart we can see that many of recent campaigns have shown much higher acceptance rate among customers with no kids when compared to those with kids.

Campaigns vs Age:

	20s	30s	40s	50s	60s	70s	80s+
Last Campaign	28.6%	15.9%	15.1%	14.9%	13.5%	15.3%	25.0%
Campaign 5	14.3%	12.1%	6.3%	6.4%	5.6%	9.0%	25.0%
Campaign 4	0.0%	5.1%	4.8%	8.3%	9.6%	8.7%	12.5%
Campaign 3	28.6%	8.4%	9.7%	6.7%	5.4%	5.7%	12.5%
Campaign 2	0.0%	1.4%	0.7%	1.5%	2.4%	0.7%	0.0%
Campaign 1	0.0%	10.7%	5.9%	3.8%	7.9%	7.7%	12.5%
Overall Response	28.6%	22.0%	18.7%	19.1%	22.7%	21.7%	56.3%

Through this chart we will measure the effectiveness of each campaign against all different age groups for our customers

Campaigns vs Customers Demographics

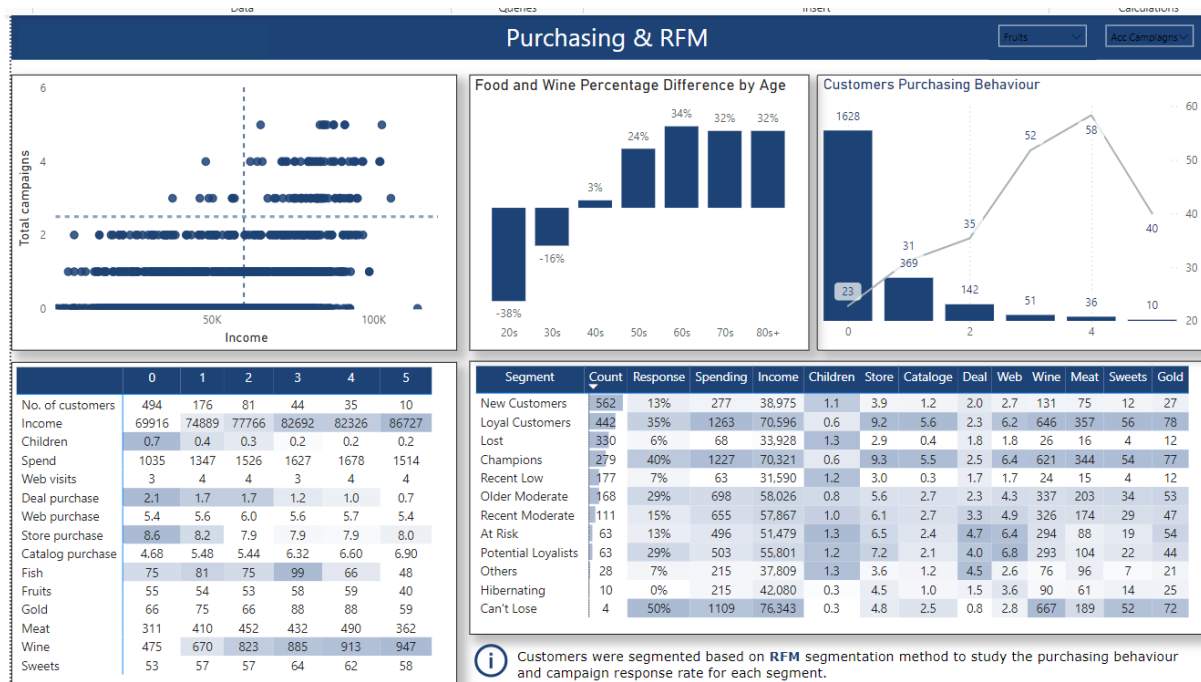

We will use all these charts to measure the effectiveness of each individual campaign and the overall response for the customer against all demographics

Conclusion

- We can see that single customer, PhD holders customers, High income, and customers with no kids are the most likely to accept our campaigns and engage with our offers.

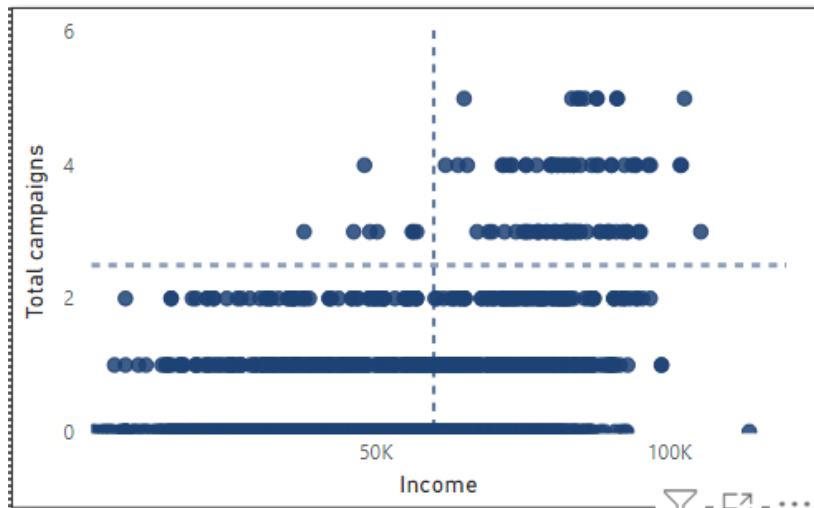

Purchasing and RFM segmentation page:

The goal of this view or page is to explore and know more about the purchasing patterns for our customers and how to categorize our customers based on their Recency, Frequency, and Monetary (RFM). It's a model used in marketing analysis that segments a company's consumer base by their purchasing patterns or habits. It evaluates customers' recency (how long ago they made a purchase), frequency (how often they make purchases), and monetary value (how much money they spend)

High customers (Loyal and Opportunity customers):

In this chart we divided our customers into 4 categories based on the salary and total accepted campaigns and we need to focus only onto 2 categories which are **Loyal High Customers** and they're the customers that has a good salary and accepted most of the campaigns and

Potential Loyal Customers that we need to focus with them.

	0	1	2	3	4	5
No. of customers	494	176	81	44	35	10
Income	69916	74889	77766	82692	82326	86727
Children	0.7	0.4	0.3	0.2	0.2	0.2
Spend	1035	1347	1526	1627	1678	1514
Web visits	3	4	4	3	4	4
Deal purchase	2.1	1.7	1.7	1.2	1.0	0.7
Web purchase	5.4	5.6	6.0	5.6	5.7	5.4
Store purchase	8.6	8.2	7.9	7.9	7.9	8.0
Catalog purchase	4.68	5.48	5.44	6.32	6.60	6.90
Fish	75	81	75	99	66	48
Fruits	55	54	53	58	59	40
Gold	66	75	66	88	88	59
Meat	311	410	452	432	490	362
Wine	475	670	823	885	913	947
Sweets	53	57	57	64	62	58

In this table now we have all the characters for those Potential loyal customers to loyal customers accepting most of our campaigns.

Conclusions:

1 - Based on customer segmentation across campaigns conversion, we should focus on marketing campaigns for the Potential loyal customers segments which covers a potential base of 34% from our overall customers

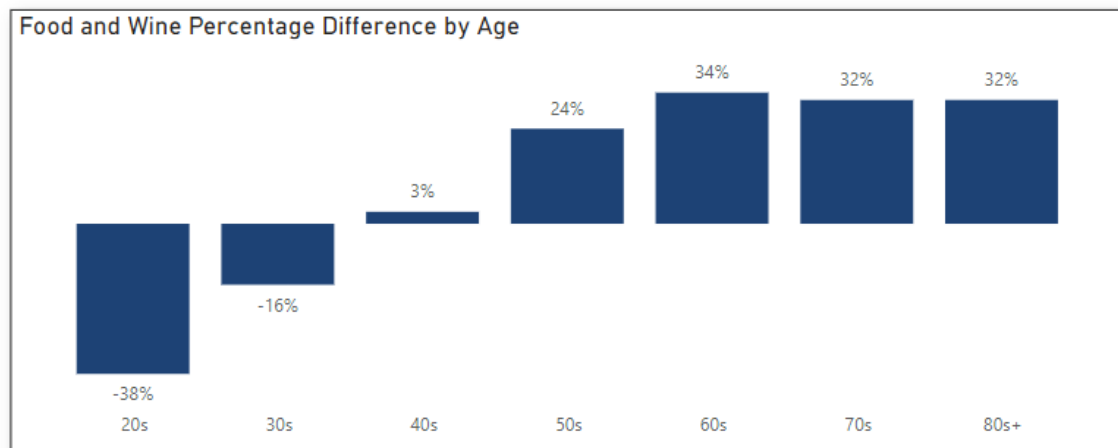

Recommendations

1 - Number of dependents tend to be relatively high for this group so maybe we can target them with campaigns targeted for childrens

2 - They generally prefer to go for deals that provide discount. And they prefer in-store purchases.

3 – There is an opportunity to focus campaigns on boosting sales for the wine and meat in this group.

Food purchasing vs Wine purchasing across

The goal from this chart is to compare how much people love to buy wine versus food based on their ages

Conclusions:

- 1- Young people in their twenties and thirties like to buy food more than wine as we can see from the chart
- 2- We find that the older the person, the more wine they buy specially who are older than 60 YO

Recommendations

- 1- Campaign for young people who are in 20s and 30s to highlight affordable and trendy food products with a focus on convenience and health
- 2- Campaign for 40s and 50s: Promote a selection of premium wines with special discounts for loyalty members.

RFM classification and purchasing behaviour for them

Segment	Count	Response	Spending	Income	Children	Store	Cataloge	Deal	Web	Wine	Meat	Sweets	Gold
New Customers	562	13%	277	38,975	1.1	3.9	1.2	2.0	2.7	131	75	12	27
Loyal Customers	442	35%	1263	70,596	0.6	9.2	5.6	2.3	6.2	646	357	56	78
Lost	330	6%	68	33,928	1.3	2.9	0.4	1.8	1.8	26	16	4	12
Champions	279	40%	1227	70,321	0.6	9.3	5.5	2.5	6.4	621	344	54	77

Can't Lose	4	50%	1109	76,343	0.3	4.8	2.5	0.8	2.8	667	189	52	72

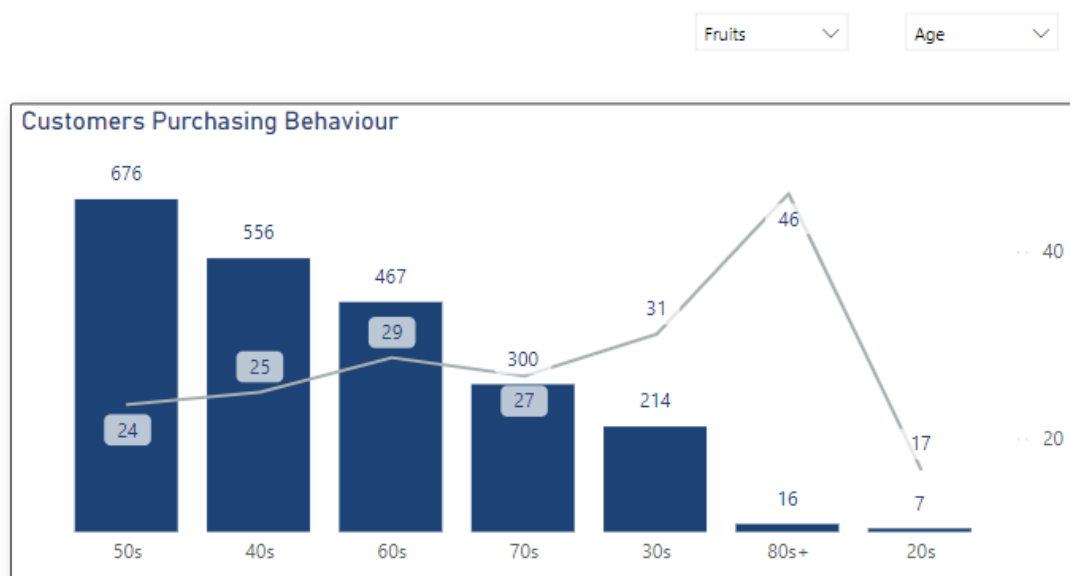

Customers were segmented based on **RFM** segmentation method to study the purchasing behaviour and campaign response rate for each segment.

The main goal from this chart is to answer the following questions

- 1) How are customers segmented based on their recency, frequency, and monetary value (RFM)?
- 2) What are the characteristics of each RFM segment (e.g., income, number of children, spending patterns)?

By understanding which segments are most responsive to campaigns, marketing efforts can be more precisely targeted

Purchasing patterns by customer demographics

The main goal for this dynamic chart is to answer the following question, **how do purchasing patterns vary by customer demographics?**

Through this chart we can see all the purchasing patterns against all customer demographics such as age, education level, marital status, and so on.

So, from this chart you will figure out all the purchasing patterns for all products and through all channels against customer demographics and this will make us figure out what should we do in our next campaigns.

Additional insights not included

Customers with no kids spent 7X more than customers with kids!
